

Experimental Workflow

Main downstream pipeline on top, with a separate dashed branch for source-task forgetting evaluation

MAIN TRANSFER PIPELINE

Data Preparation

EuroSAT main task
CIFAR-10 comparison
EuroSAT data fractions
class-balanced splits, resize, augmentation

Model Setup

ResNet-18 backbone
ImageNet weights or random init
Replace with 10-class head
same loss, different trainable layers

Downstream Experiments

4.1 Strategy ablation: scratch, linear, partial, full
4.2 Domain gap: EuroSAT vs CIFAR-10
4.3 Data size: 10%, 30%, 60%, 100%

Downstream Evaluation

Test top-1 accuracy
Macro-F1
Transfer gain over scratch
best checkpoint selected by validation top-1

FORGETTING BRANCH

Adapted Checkpoints

take the downstream-trained backbone

ImageNet Forgetting Test

reload backbone into 1000-class model
evaluate on ILSVRC2012 val and compute before - after

Solid arrows show the main downstream workflow; dashed arrows show the additional forgetting evaluation branch.
